

Sidecar

The private AI co-processor for your work laptop.

A quantised model runs on the iQOO's Hexagon NPU. Office Kit is the wire. Your laptop gets a real assistant for the documents it is not allowed to send anywhere — and the whole demo runs in airplane mode.

0

BYTES LEAVE THE DESK

THE PROBLEM

The most useful AI is banned exactly where the work matters

Every AI tool a working engineer reaches for is a browser tab that ships the employer's data to someone else's servers. So the highest-value documents on the desk get no help at all.

Client contracts

NDA-bound. Cannot be pasted into a chat tab, so nobody reads the fine print twice.

Internal source code

Blocked by policy on most enterprise laptops in Hyderabad.

Customer calls

Recording to a transcription service moves personal data offshore.

Unreleased specs

The one document where a second reader would actually catch something.

A phone with an NPU is the only hardware on that desk that can run a real model with no network path at all.

Priya, a delivery lead in Hyderabad

Reviewing a 40-page client MSA on a laptop that blocks every AI tool, with a status call in an hour.

TODAY

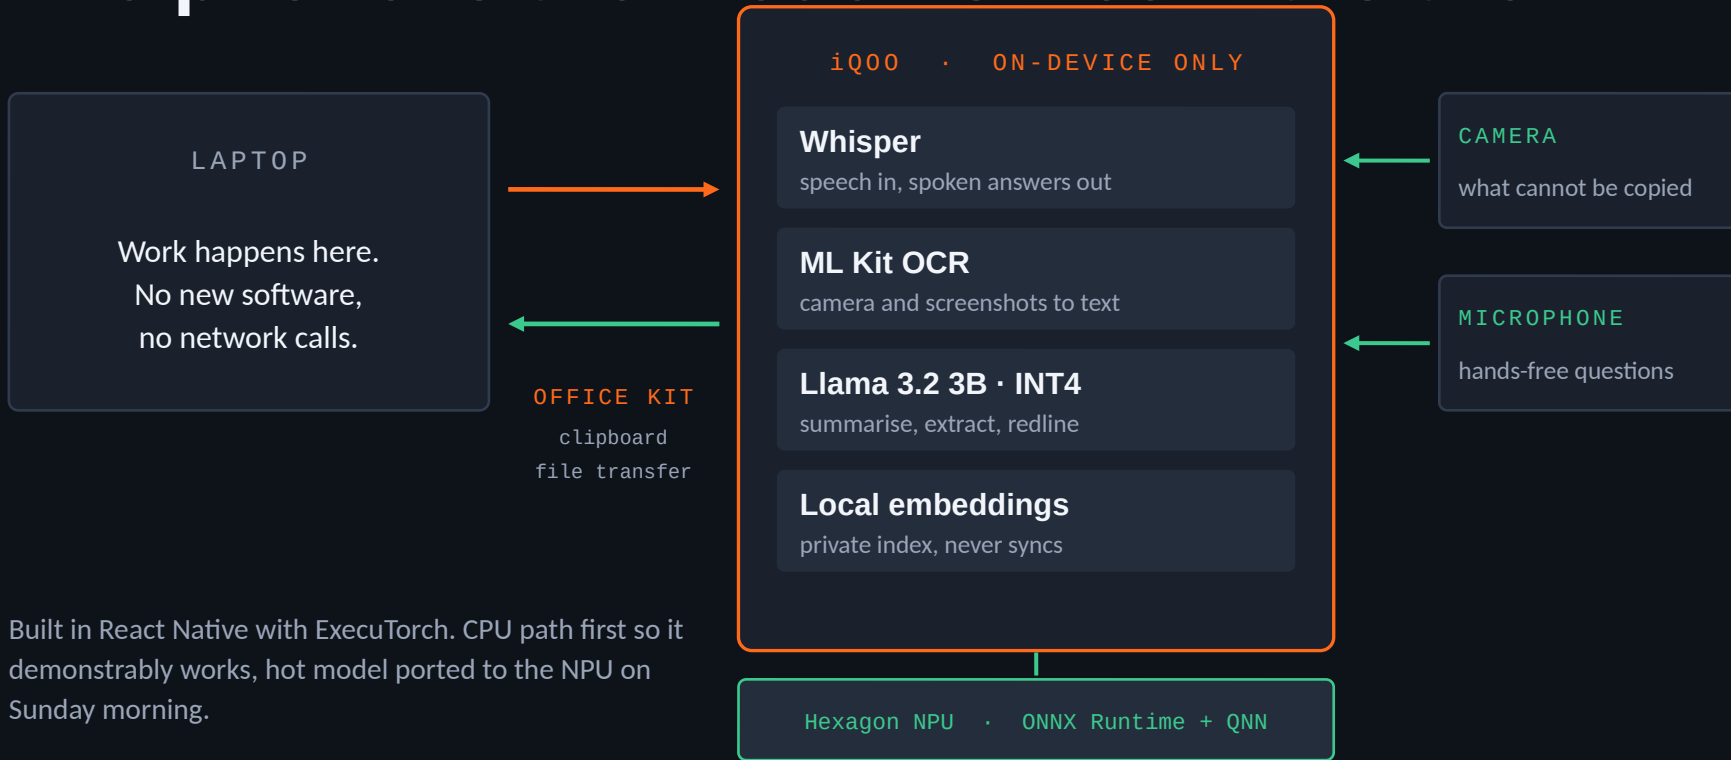

- Reads all 40 pages herself, twice.
- Retypes the payment terms into a mail to legal.
- Misses the indemnity clause on page 31.
- Photographs the printed annexure and forgets about it.

WITH SIDECAR

- Selects and copies a clause; the risk summary is back in her clipboard in about two seconds.
- Drops the PDF into the Office Kit folder and asks out loud what the exit terms are.
- Points the phone camera at the printed annexure that cannot be copied.
- The laptop never opened a network connection to do any of it.

Same laptop. Same policy. The model just moved to a device she already owns.

The phone is the model. Office Kit is the API.

Airplane mode is on before the pitch starts

Four beats, three minutes, one live byte counter on screen the whole time reading zero.

01

Prove the cage

Airplane mode toggled on stage. A network monitor stays visible for the whole pitch. Nothing can reach a server.

02

The clipboard round trip

Copy an indemnity clause on the laptop. About two seconds later the obligations and the risk flag are in the laptop clipboard.

03

The camera path

Point the phone at a printed annexure nobody can copy-paste. OCR feeds the same local model; the answer is spoken aloud.

04

The memory

Ask a question that only makes sense if it remembers the first document. The local index answers. Still zero bytes.

Every beat exercises a scored counter: camera, microphone, on-device inference and the Office Kit bridge.
